Polynucleotide encoding MMLR-CCR or MPHG-CCR chemokine receptor - useful to study, diagnose and treat, e.g. infection, inflammation, solid tumour and proliferative and cardiovascular disease.

Claim 8; Page 37-38; 59pp; English

This protein comprises human WMLR-CCR, a novel C-C chemokine receptor associated with monocyte/macrophage infiltration and chemotaxis and haematopolesis. The amino acid sequence was deduced from a cDNA clone (see AAT99542) obtained from a cDNA library made from monomuclear cells collected on day 2 of a mixed lymphocyte culture, i.e. cells associated with inflammation and immunomodulation. Another novel chemokine receptor, MPHG-CCR (see AAN36767), is also claimed. MALR-CCR contains 7 transmembrane spanning segments connected by a serives of intracellular and seriacellular loops. MMLR-CCR and be used to study, diagnose and treat disease states in which normal leukocyte function is perturbed by normal leukopoiesis or inappropriate activation via proliferative disease, tumourigenesis, autoimmune disease, abnormal coll proliferation, solid tumours, cardiovascular disease, abnormal cell arthus, myasthenia gravis, diabetes, inflammatory bowel disease, toxic shock syndrome, septic shock and Chediak-Higashi syndrome

Active CCR-5 is also a receptor of human immunodeficiency virus type 1 or type 2 (HIV-1 or HIV-2). CCR5 or its cDNA can used to diagnose, treat and/or prevent inflammatory diseases, e.g. rheumatoid arthritis, glomernlonephritis, asthma, idiopathic pulmonary fibrosis and psoriasis, viral infections, especially HIV-1 or HIV-2 infection, cancer,
                                                                                                                                                 Human Cys-Cys chemokine receptor 5; CCR5; human immunodeficiency virus; type 1; type 2; HIV-1; HIV-2; diagnosis; treatment; prevention; inflammatory disease; rheumatoid arthritis; glomerulonephritis; asthma; diopathic pulmonary fibrosis; psoriasis; viral infection; cancer; atherosclerosis; autoimmune disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Active and inactive forms of human CC chemokine receptor CCR-5 - useful to diagnose, prevent and/or treat inflammatory disorders, autoimmune disease and viral infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

Its amino sequence was deduced from a cDNA clone (AAAT85161) isolated from a macrophage library. It shows 62% identity to CCCKR1. Chemokine receptor 88-28 (see AAW27124) has also been identified. 88C and 88-2B receptors and their polypeptide fragments can be produced in transformed host cells. The receptors, peptides comprising one or more of the extracellular or intracellular domains, and anti-receptor antiboddes can

```
Novel human mature G-protein chemokine receptor HDGNRIO (AAW07602) is a 7-transmembrane protein involved in signal transduction. Its amino acid sequence was deduced from a cDNA clone (AAT44042) isolated from a human moncoyte library. Isolation of the cDNA allows prodn. of recombinant HDGNRIO in host, e.g. E. coli, COS or Sf9, cells. The recombinant sceptor can be used to identify agonists or antagonists of the receptor; such cpds. can be used to treat conditions related to the under- and over-expression of G-protein chemokine receptors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC chemokine receptor 5; CCR5; G-protein coupled receptor; human immunodeficiency virus; HIV; CD4; AIDS; therapy; transgenic animal.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This polypeptide sequence comprises macaque chemokine receptor 88C, a G protein coupled receptor that is involved in leukocyte trafficking. Its amno sequence was deduced from a 88C DNA (AAT85163) isolated by PCR amplification. It shows 97% identity to human 88C (AAW27123). 88C receptors and their polypeptide fragments can be produced in transformed host cells. The receptors, peptides comprising one or more of the extracellular or intracellular domains, and anti-receptor antibodies can be used to modulate receptor activities, particularly ligand and G protein binding, and are potentially potentially useful in the treatment of atheroslerosis, inflammatory conditions, pathological immune response, antibody that specifically binds to macaque 88C is claimed antibody that specifically binds to macaque 88C is claimed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New nucleic acid encoding chemokine receptors 88-2B and 88C - used to modulate leukocyte trafficking, e.g. for treatment of inflammation, tumours, viral infections, auto-immune diseases, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

                                                                                                                                                                                                                                                                                                                                      This protein sequence comprises of a novel human macrophage-selective CC chemokine receptor that has been designated CGB. The sequence was deduced from an isolated cDNA clone (see AAT76920). An Ala127Leu variant (see W228340 of CCRS was also identified. The susceptibility of human macrophages to HIV infection depends on cell surface expression of CD4 protein coupled cell surface molecules. It plays an essential role in the membrane fusion step of infection by some HIV isolates. The establishment of stable, non-human cell lines and transgenic mammals having cells that coexpress human CD4 and CCR5 provides valuable tools for research of HIV infection. Antibodies that bind to CCR5, CCR5 variants, and CCR5-binding represent potential anti-HIV therapeutics for macrophage tropic strains of HIV
                                                                                                                                                                                                                                                                                           CC chemokine receptor 5 polypeptide - used to inhibit membrane fusion

The specification describes an antibody which is specific for an antigenic fragment of gp120. This antigenic fragment binds to DC-SIGN or is exposed upon gp120 binding of DC-SIGN due to concomitant conformational change. DC-SIGN is a receptor that is specifically expressed on dendritic cells and facilitates infection of T lymphocytes with HIV. DC-SIGN is identical to a HIV-1 gp120-binding C-type lectin. DC-SIGN binds ICAM-3 (which is expressed constitutively on T lymphocytes) with high affinity. The antibody of the invention inhibits the trans enhancement of HIV entry into a T cell or macrophage facilitated by dendritic cells. The antibody is useful to treat or prevent HIV infection. The present sequence represents a human CCRS protein, which is a translocation promoting agent that interacts with CD4. This receptor
                                                                                                            dendritic cell; T lymphocyte; HIV; gpl20; entry; T cell; macrophage; HIV infection; CCR5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       human immunodeficiency virus; antimicrobial; vasodilator; vulnerary; cytostatic; immunosuppressive; nootropic; neuroprotective; gene therapy; neurodegenerative disorder; Kaposi's sarcoma; autoimmune disease; rheumatoid arthritis; cancer; breast; ovary; adrenal gland; bone marrow; gastrointestinal tract; lung; immune disorder; Addison's disease; haemolytic anaemia; autoimmune thyroiditis; diabetes mellitus; allergy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    An antibody for the treatment or prevention of HIV-infection comprises a gpl20 portion which binds to DC-SIGN or is exposed upon gpl20 binding of DC-SIGN due to concomitant conformational change.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       G-protein chemokine receptor; CCRS; HDGNR10; inflammation; HIV;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human G-protein chemokine receptor (CCR5) HDGNR10 protein #1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    100.0%; Score 95; DB 4; Length 352; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ਨੇ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents a human G-protein chemokine receptor designated HDGNR10. HDGNR10 polynucleotides are useful in methods of screening for compounds which bind to and either: (1) activate the HDGNR10 polypeptides causing stimulation of haematopolesis, wound healing, coagulation, and angiogenesis; treatment of solid tumours, chronic infections, psoriasis, and to etimulate growth factor activity; or (2) inhibit activation of the HDGNR10 polypeptides which is useful for preventing and/or treating allergy, atherogenesis, anaphylaxis, malignancy, chronic and acute inflammation, histamine and immunoglobulin E-mediated allergic reactions, prostaglandin-independent fever, bone marrow failure, stilosis, sarcoidosis, rheumatoid arthritis shock and hyper-eosinophilia syndrome. The polymucleotides are also useful for diagnostic assays for detecting diseases related to mutations in the altered level of the soluble form of the receptor polypeptides. The polymucleotides are also useful for in vitro purposes related to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

                                                                                                                                                                                                                                                                                                                Domain
                                                                                                                                                                                                                                                                                                                                                     Domain
                                                                                                                                                                                                                                                                                                                                                                                                                                          Domain
```

The invention relates to human G-protein chemokine receptor (CCR5) HDGNR10 polypeptides and polynucleotides. CCR5 HDGNR10 antibodies are useful for treating, preventing or ameliorating a disease or disorder

Claim 102; Fig 1; 518pp; English.

cells, HIV infection (such as Pneumocystis carinii pneumonia or Kaposi's sarroma) or defective or aberrant Total antigen presenting cell interaction. The disease or disorder may also be an infections disease (e.g. a viral infection such as an early stage HIV infection, a autonomensate or disorder may also be an infection, a new compalavirus infection, or a poxvirus infection, an autonoment of disease (e.g. rheumatoid arthritis) or a neurodegenerative disorder. The disease or disorder may be associated with aberrant CCRS expression, lack of CCRS function. CCRS HOGNRIO protein is used as a food additive or preservative or increase or decrease storage capabilities. CCRS HOGNRIO DNA, cor chromosome identification and in gene therapy. CCRS HOGNRIO DNA, protein, antibodies, agonists and antegonists are also useful in the disorders, agonists and antegonists are also useful in the cland, bone, bone marrow, gastrointestinal tract, liver lung, utodomnume thyroiditis, disbetes mellitus, Crohn's haemolytic anaemia, autoimmune thyroiditis, disbetes mellitus, Crohn's chaemolytic anaemia, autoimmune thyroiditis, disbetes mellitus, Crohn's cadiovascular disorders (myocadial ischaemias) and wound healing. The cyc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human, G-protein chemokine receptor; CCR5; HDGNR10; inflammation; HIV, human immunodeficiency virus; antimicrobial; vasodilator; vulnerary; cytostatic; immunosuppressive; noctropic; neuroprotective; gene therapy; neurodegenerative disorder; Kaposi, s sarcoma; autoimmune disease; rheumatoid arthritis; cancer; breast; ovary; adrenal gland; bone marrow; gastrointestinal tract; lung; liver; immune disorder; Addison's disease; haemolytic anaemia; autoimmune thyroiditis; diabetes mellitus; allergy; multiple sclerosis; ulcerative colitis; Crohn's disease; wound healing; cardiovascular disorder; myocardial ischaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Isolated nucleic acid encoding a human G-protein chemokine receptor (CCR5) HDGNR10 polypeptide, useful for preventing or treating autoimmune

The invention relates to human G-protein chemokine receptor (CCRS)

HDGRRIO polypeptides and polymucleotides. CCRS HDGRRIO antibodies are
useful for treating, preventing or ameliorating a disease or disorder
associated with inflammation, defective or aberrant chemotaxis of immune
cells, HIV inflammation, defective or aberrant chemotaxis of immune
cells, HIV inflammation (such as Pneumcoystis carinii pneumonia or Kaposi's
sarcoma) or defective or aberrant T-cell antigen presenting cell
cinteraction. The disease or disorder may also be an infectious disease
cels, a viral infection such as an early stage HIV infection, a autoimmune
cytomegalovirus infection, or a poxvirus infection), an autoimmune
cytomegalovirus infection, or a poxvirus infection), an autoimmune
cissase (e.g. rheumatoid arthritis) or a neurodegenerative disorder. The
disease or disorder may be associated with aberrant CCRS expression, lack
of cCRS function, aberrant CCRS ligand expression, or lack of CCRS ligand
function. CCRS HDGNRIO protein is used as a food additive or preservative
cof curcase or decrease storage capabilities. CCRS HDGNRIO DNA,
cor chromosome identification and in gene therapy. CCRS HDGNRIO DNA,
cor chromosome identification and in gene therapy. CCRS HDGNRIO DNA,
cor chromosome identification and an endomists are also useful in the
content, antibodies, agonists and antegonists are also useful in the
correction, bone marrow, gastrointestinal tract, liver, lung,
curogenital); immune disorders (Addison's disease, altergies, autoimmune
correction or decrease (mycoardial ischaemias) and wound healing. The
correction or decrease (mycoardial ischaemias) and wound healing. The
correction or decrease (mycoardial ischaemias) and wound healing. The
correction or present sequence is human CCRS HDGNRIO protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Chemokine; tumour diagnosis; colorectal; prostatic; organ rejection; inflammation; autoimmune disease; metastasis; bronchial asthma; lupus; chronic bowel inflammation; rheumatoid arthritis; cytostatic; antiinflammatory; antiasthmatic; immunosuppressive; dermatological; antirheumatic; antiarthritic;

                                                                                                                                                        or prostatio, organ rejection, inflammation and autoimmune diseases. Also inhibitors of (I) are used therapeutically against tumors (and their metastases), inflammation (particularly bronchial asthma or chronic bowel inflammation), or autoimmune diseases (theumatoid asthma or chronic bowel inflammation), or autoimmune diseases (theumatoid arthritis or lupus), where the (cardio) vascular, lymphatic, respiratory, nervous, digestive, endocrine, motor or urogenital systems or skin are affected, and bone marrow diseases. The products of the invention are chemokine derivatives which have cytostatic, antiinflammatory, antiasthmatic, immunosuppressive, dermatological, antirheumatic, antiarthritic. Chemokines act on specific tumor and inflammatory cells through a constellation of chemokine receptors (CR), which control migration and proliferation of these cells. AG880045-AA880128 represent human chemokine fragments used to illustrate the method of the invention
Diagnostic agent containing two or more receptor-specific ligands, useful for detecting tumors, inflammation etc., also therapeutic use of ligand inhibitors.
                                                                                                      This invention describes a novel diagnostic agent (A) comprising at least two different ligands (I) for receptors (II) that are implicated in disease. (A) are used for the diagnosis of tumors (especially colorectal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    mammalian cell (I) that contains a CD4 gene, reporter gene for identification of drugs and antibodies for treatment of

The present invention relates to a transformed mammalian cell that contains a gene encoding CD4, a construct encoding a reporter gene under the regulation of an human immuno deficiency virus (HIV) long terminal repeat (LTR) and that has been transduced with a vector encoding a human chemokine receptor (CKR) where the CD4 and the CKR are present on the cell surface of transformed mammalian cell. The invention is useful for identifying drugs or antibodies that interfere with the translocation of HIV into transformed mammalian cell or for identifying a human chemokine receptor that facilitates the infection of a particular HIV strain into the transformed mammalian cell. Compounds identified can be used to treat cellular dysfunction and to prevent or combat HIV infection. The present sequence is a human chemokine receptor (CKR), CC-CKR-5 related protein. CC-CKR-5 is the principal cofactor for entry mediated by the envelope glycoproteins of primary macrophage-tropic strains of HIV-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Length 352;

The present sequence is human G-protein chemokine receptor (CCR5) HDGNR10 protein. CCR5 HDGNR10 cDNA is included in ATCC Deposit No: 97183. CCR5 protein. CCR5 HDGNR10 cDNA is included in ATCC Deposit No: 97183. CCR5 HDGNR10 antibodies are useful for treating, breventing or ameliorating a disease or disorder associated with inflammation, defective or aberrant chemotaxis of immune cells, HIV infection (such as Pneumocystis carini preeming or Raposi's sarcoma) or defective or aberrant T-cell antigen confined in the cation. The disease or disorder may also be an infection, a cytomegalovirus infection, or a poxvirus infection, an infection, a cytomegalovirus infection, or a poxvirus infection, an infection, a cytomegalovirus infection, or a poxvirus infection, or a catofimmune disease or disorder may be associated with aberrant CCR5 disorder. The disease or disorder may be associated with aberrant CCR5 capterssion, lack of CCR5 function. CCR5 HDGNR10 protein is used as a food additive or preservative to increase or decrease storage capabilities. CCR5 HDGNR10 DNA, protein, antibodies, agonists and antagonists are also useful in the diagnosis, treatment and prevention of cancer (breast, ovary, adrenal gland, bone, bone marrow, gastrointestinal tract, cutoimmune haemolytic anaemia, autoimmune thyroidicis, disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroidicis, disease, allitus, colitis); cardiovascular disorders (Myocardial ischaemias) and wound beand the colitis).

Isolated nucleic acid encoding a human G-protein chemokine receptor (CCRS) HDGNR10 polypeptide, useful for preventing or treating autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders and neurodegenerative disorders.

Example 40; Page 486-487; 495pp; English.

The present sequence is human G-protein chemokine receptor (CCR5) HDGNR10 protein. CCR5 HDGNR10 antibodies are useful for treating, preventing or ameliorating a disease or disorder associated with inflammation, and clective or aberrant chemotaxis of immune cells, HIV infection (such as Pheumocystis carinii preumonia or Kaposi's sarcoma) or defective or aberrant T-cell antigen presenting cell interaction. The disease or disorder may also be an infectious disease (e.g. a viral infection, or a poxytus infection), an autoimmune disease (e.g. a rheumatoid arthritis) or a neurodegenerative disorder. The disease (e.g. rheumatoid arthritis) or a neurodegenerative disorder. The disease or disorder may be associated with aberrant CCR5 expression, lack of CCR5 function, aberrant CCR5 ilgand euction, aberrant CCR5 ilgand euction. CCR5 HDGNR10 protein is used as a food additive or preservative to increase or decrease storage capabilities. CCR5 HDGNR10 DNA are useful for chromosome contification and in gene therapy. CCR5 HDGNR10 DNA, protein, treatment and prevention of cancer (breast, orary, adrenal gland, bone, bone marrow, gastrointestinal tract, liver, lung, urogenital); immune disorders (Addison's disease, allergies, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple carders (myocardial ischaemias) and wound healing

New human G-protein chemokine receptor polypeptides and polynucleotides, useful for identifying (ant)agonists to the G-protein chemokine receptor N-PSDB; AAF26390

Claim la; Page 15; 22pp; English.

This invention describes a novel receptor polypeptide (I) selected from (i) a fully defined 329 amino acid sequence (II) fully disclosed in the specification; and (ii) a polypeptide encoded by the cDNA contained in a plasmid, and fragments, analogs and derivatives of the polypeptide. The products of the invention have antiinflammatory, immunomodulatory, anticoaculant, antiallergic, immunosuppressive, vulnerary, cytostatic, antiportatic, antipheumatic, antiarthritic and vasctropic activity and can be used for gene therapy. The G-protein chemokine activity and can be used for gene therapy. The G-protein chemokine activity and can be used for gene therapy. The G-protein chemokine activate or inhibit activation of (I). The products of the invention can also be used for stimulating haematopoiesis, wound healing, coagulation, and open sees is, treating solid tumours, chronic infections, psortassis, and stimulating growth factor activity. HDGNR10 is useful for treating

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to G protein-coupled receptors (GPCRs) for which the endogenous ligand has been identified. Non-endogenous constitutively activated versions of known GPCRs are used in the invention for the direct identification of candidate compounds as receptor agonists, inverse agonists or partial agonists. Such agonists are useful as therapeutic agents for diseases or disorders associated with GPCRs. The present sequence is a non-endogenous version of a known human GPCR
allergy, atherogenesis, anaphylaxis, malignancy, chronic and acute inflammation, histamine and immunoglobulin E (IgE)-mediated allergic reactions, prostaglandin-independent fever, bone marrow failure, silicosis, sarcoidosis, rheumatoid arthritis, shock and hyperecisinophilic syndrome. This sequence represents the human CCRS protein sequence. The invention relates to a method for determining whether an agent is capable of modulating the interaction of chemotractic chemokine receptor 5 (CCRS) with gp120, comprising incubating the agent with CCRS and gp120 and determining whether the agent modulates the interaction, where gp120 and determining whether the agent modulates the interaction, where gp120 is associated with CDR, and where the interaction is a low affinity binding. The method is used to identify an agent capable of modulating the interaction of CCRS with gp120, an agent capable of modulating the comparison of CCRS with gp120 interaction for the treatment of a disease or condition associated with CCRS and gp120 interaction, to treat a subject with a disease or condition associated with CCRS and gp120 interaction, and for preparing a pharmaceutical for treating human immunodeficiency virus (HIV). It can also be treat anti-inflammatory diseases. The method is commercially useful, amenable to high throughput screening, and etects interaction of gp120 with cells expressing only CCRS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence is that of human HIV-1 co-receptor CCR5. Amino acids 2-18 in the N-terminal region of CCR5 comprise an HIV-1 gp120-binding site that determines the specificity of the interaction between CCR5 and HIV-1 gp120. Post-translational sulfation of the tyrosine residues in the CCR5 N-terminus is required for gp120 binding and may critically modulate the susceptibility of target cells to HIV-1 infection in vivo. The invention provides claimed sulfated peptides (see AAB82947) that are based on the CCR5 N-terminal region and which are effective for inhibiting HIV-1 binding to CCR5. These peptides are used in claimed methods of inhibiting HIV infection of CO4+ cells, of preventing CD4+ cells from becoming infected with HIV, of tracating a subject whose CD4+ cells are infected with HIV, and of identifying an agent which inhibits building of a CCR5 ligand to a CCR5 receptor. The methods may be carried out in a subject, especially a human, infected (therapeutic method), not infected with HIV (prophylactic method), or in a subject who is not infected with, but has been exposed to, HIV

The present invention relates to the isolation of a novel human G-protein chemokine receptor (CCRS) designated HDGNR10, and polynucleotide chemokine receptor (CCRS) HDGNR10 and polynucleotide sequences encoding it. The invention also describes antibodies that bind human G-protein chemokine receptor (CCRS) HDGNR10 and polynucleotide chuman G-protein chemokine receptor (CRS) HDGNR10 and polynucleotide cor preventing inflammation, defective or aberrant chemotexis of immune colls and T-cell/antigen-presenting cell interactions, infections of immune cells and T-cell/antigen-presenting cell interactions, infections of immune cells and T-cell/antigen-presenting cell interactions, infections of immune cells and polynucleotide strong-cells interaction viral correspondations of the conditions associated with aberrant or deficient expression of the CCRS receptor or its ligands. The antibodies are also useful to determine CCRS expression, ce.g. for diagnosis, prognosis and monitoring of cancer and other compinant receptor, and in the treatment of a wide range of diseases such as infectious diseases (e.g. influenza) neurological diseases (e.g. HDGNR10 the receptor (CCRS) HDGNR10 and produce the receptor (CCRS) HDGNR10 and singer receptor (CCRS) HDGNR10 the receptor (CCRS) the HDGNR10 th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New nucleic acid encoding an antibody specific for the G-protein chemokine receptor CCRS, useful for treatment and diagnosis of e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ..

AAM52829;

Human CCR5 Gln 55 variant

Location/Qualifiers

Homo sapiens

```
The present invention relates to the isolation of a movel human G-protein chemokine receptor (CCR5) designated HDGNR10, and polymucleotide sequences encoding it. The invention also describes antibodies that bind human G-protein chemokine receptor (CCR5) HDGNR10 and polymucleotide sequences encoding the antibodies. The antibodies are useful for treating or preventing inflammation, defective or aberrant chemotaxis of immune cells and T-cell/antigen-presenting cell interactions, infections and autoimmune diseases, rheumatoid arthritis, neurodegeneration, viral infections (especially early-stage human immune deficiency virus (HIV), cytomegalovitus or pox virus infections, Kaposi sarcoma, or conditions associated with aberrant or deficient expression of the CCR5 expression, its ligands. The antibodies are also useful to determine CCR5 expression, e.g. for diagnosis, prognosis, and monitoring of caneer and orher hyperproliferative diseases. The polymucleotide sequences encoding human G-protein chemokine receptor (CCR5) HDGNR10 can be used to produce the receptor, and in the treatment of a wide range of diseases such as infections diseases (e.g. influenza), neurological diseases (e.g. cancer). The present sequence represents human G-protein chemokine receptor (CCR5) HDGNR10 chemokine receptor (CCR5) TDGNR10 chemokine receptor (CCR5) TDGNR10 chemokine receptor (CCR5) TDGNR10 chemokine 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New nucleic acid encoding an antibody specific for the G-protein chemokine receptor CCR5, useful for treatment and diagnosis of e.g. inflammation.
                                                                                                                                                  immune cell chemotaxis; autoimmune disease; rheumatoid arthritis;
neurodegeneration; viral infection; Kaposi sarcoma; cancer;

The invention relates to a method for identifying a binding compound for a chemokine receptor 5 (CCR5). The method involves screening a library of test molecules (particularly peptides) with immobilised CCR5, and then identifying those molecules which bind. The invention also relates to cors.-binding molecules identified using the method of the invention. The transfer vector encoding tagged CCR5, a computer-aided methods for transfer vector encoding tagged CCR5, a computer specifies, a computer aided drug screening assay that utilises the three-dimensional a computer aided drug screening assay that utilises the three-dimensional structure of CCR5. Compounds identified using the methods for structure of CCR5. Compounds identified using the methods of the invention are useful for treating or preventing HTV (human immunodeficiency virus) infection or AIDS (acquired immunodeficiency syndrome) in a patient. The methods of the invention may also be used to identify agonists or antagonists of the interaction of CCR5 with its natural ligand, and to determine a binding motif for CCR5. The present is equence represents a naturally occurring variant of human of the control of the con
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ·,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Identifying CC chemokine receptor 5 binding compound for treating AIDS, comprises binding a molecule from library to a molecule having binding property corresponding to CCRS and identifying bound molecule.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

```
The invention relates to a method for identifying a binding compound for CC chemokine receptor 5 (CCR5). The method involves screening a library of test molecules (particularly peptides) with immobilised CCR5, and then identifying those molecules which bind. The invention also relates to CCR5-binding molecules identified using the method of the invention, methods for identifying consensus motifs for CCR5-binding peptides, a transfer vector encoding tagged CCR5, a computer-aided methods for determining the relative binding asfainity of a test molecule to CCR5 and a computer aided drug screening assay that utilises the three-dimensional structure of CCR5. Compounds identified using the methods of the invention are useful for treating or preventing HIV (human immunodeficiency virus) infection or AIDS (acquired immunodeficiency syndrome) in a patient. The methods of the invention may also be used to seduence in a determine a binding motif for CCR5. The present sequence represents human CCR5.
                                                                                                                                                                      CCR5; CC chemokine receptor 5; human; HIV infection; human immunodeficiency virus; AIDS; acquired immunodeficiency syndrome; drug screening; identification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Identifying CC chemokine receptor 5 binding compound for treating AIDS, comprises binding a molecule from library to a molecule having binding property corresponding to CCR5 and identifying bound molecule.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Tan Hehir CA;

The present invention relates to the isolation of human G-protein chemokine receptor, HDGNR10 (CCR5 receptor), and the polymucleotide sequence encoding it. HDGNR10 polymeptide and polymucleotide sequences or useful for diagnosing a disease or a susceptibility to a disease related to underexpression of HDGNR10. They are useful for identifying modulators for stimulating haematopoiesis, wound healing, coagulation, angiogenesis, to treat solid tumours, chronic infections, psoriasis, or for stimulating growth factor activity. The sequences are also useful for preventing and/or treating allergy, atherogenesis, anaphylaxis, malignancy, chronic and acute inflammation, histamine and immunoglobulin E (IgB)-mediated allergic reactions, prostaglandin-independent fever, bone marrow failure, sarcoidosis, rheumatoid arthritis, shock and hypercessinophilic syndrome. Polymucleotide sequences encoding HDGNR10 can be used in gene therapy to treat conditions related to underexpression of HDGNR10. The present sequence represents human G-protein chemokine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

RESULT 33
           ABG92883
```

```
The invention describes an isolated polynucleotide encoding a first antibody at least 95-100% identical to a second antibody consisting of an amino acid sequence comprising at least one, three CDR regions of a wariable heavy (VH) or variable light (VL) domain of the antibody expressed by a hybridoma cell line consisting of XF3.5F1, XF11.1F8, XF27/28.1885, XF27/28.3F1, XF11.1F8, XF27/28.1885, XF27/28.3F2.0F2, XF27/28.3F2.0F2, XF27/28.3F2.0F2, XF27/28.1885, XF27/28.3F2.0F2, XF27/28.3F2, XF
New human G-protein Chemokine Receptor gene (HDGNR10) useful for treating, preventing, ameliorating or monitoring diseases or disorders associated with aberrant expression of HDGNR10 e.g. cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           seguence of hum:

expression of CCR5 or their ligands. They are also used for the

```
The invention relates to human G-protein chemokine receptor (CCR5), HDGNR10 proteins and nucleic acid molecules encoding such proteins. CCR5 defectives are used for the treatment or prevention of inflammation, defective or aberrant chemotaxis of immune cells or T cell antigenpresenting cell interaction, viral infections (specifically human immune deficiency (including its early stages), cytomegalo or pox viruses), autoimmune disease, rheumatoid arthritis, neurodegeneration, Pneumocystis carinii infection, Kaposi's sarcoma or any condition associated with
                                                                                                                                                                                                                                                                        ö
certain haematopoietic cells such as histiocytosis, defective or aberrant chemotaxis of immune cells or T-cell antigen presenting cell interaction, an infectious disease, an autoimmune disease such as Addison's disease, dermatitis and rheumatoid arthritis, allergies, a neurodegenerative disorder, a viral infection e.g. HIV infection, cytomegalovitus or poxvirus infection, a Pneumocystis carnii infection, Kaposi's sarcoma, cardiovascular disorders such as atherosclarosis, lymphocytopenias, or a disease or disorder associated with aberrant expression of novel human G-protein chemokine receptor (CCRS) HDGNR10. This is an amino acid sequence of Human G-protein chemokine receptor (CCRS) HDGNR10. #1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New nucleic acid encoding antibodies to the human CCR5 receptor HDGNR10, useful for treatment, prevention and diagnosis of e.g. cancer, also

The invention relates to human G-protein chemokine receptor (CCR5), HDGNR10 proteins and nucleic acid molecules encoding such proteins. CCR5 antibodies are used for the treatment or prevention of inflammation, defective or aberrant chemotaxis of immune cells or T cell antigenpresenting cell interaction, viral infections (specifically human immune deficiency (including its early stages), cytomegalo or pox viruses), autoimmune disease, rheumatoid arthritis, neurodegeneration, Pneumocystis carinii infection, kaposi's sarcoma or any condition associated with detection, diagnosis, prognosis and monitoring of cancers or other hyperproliferative diseases. The present sequence is human G-protein chemokine receptor (CCR5), HDGNR10 DNA
                                                                                                                                    ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New nucleic acid encoding antibodies to the human CCRS receptor HDGNR10, useful for treatment, prevention and diagnosis of e.g. cancer, also
                                                                                                                                                                                                                                                                                                                                                                                                       Human, G-protein chemokine receptor; CCR5, HDGNR10 protein; cancer; inflammation; viral infection; autoimmune disease; neurodegeneration; rheumatoid arthritis; Pneumocystis carinii infection; Kaposi's sarcoma; hyperproliferative disease; receptor.
                                                                                                                                    Gaps
           detection, diagnosis, prognosis and monitoring of cancers or other hyperproliferative diseases. The present sequence is human G-protein chemokine receptor (CCRS), HDGNR10 DNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a novel human 7-transmembrane receptor, HDGNR10, which has been identified as a G-protein chemokine receptor. The GPCR HDGNR10 polypeptide can be expressed by standard recombinant methodology. Compounds that activate or inhibit the receptor polypeptide, optionally expressed from DNA in gene therapy vectors, are used to treat diseases that require: (a) activation of the receptor (e.g. stimulation of haematopoises; treatment of solid tumours, T-cell mediated autoimmune diseases, parasitic infections, psoriasis etc.); or (b) inhibition of the receptor (e.g. allergy, inflammation, rheumatoid arthritis, silicosis etc.). The present sequence represents the human HDGNR10 receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New polynucleotide encoding a human G protein chemokine receptor HDGNR10, useful e.g. for treating tumors.

The present sequence is that of a polypeptide encoded by the human chemokine (C-C motif) receptor 5 (CCR5) gene of the invention (see ABA97318, ABA97319). The specification describes haplotyping the CCR5 ABA97319. The specification describes haplotyping the CCR5 can individual by determining if the individual has one of the CCR5 haplotypes or haplotype pairs fully defined in the specification of the specification also describes an isolated polymucleotide comprising a nucleotide sequence which is a polymorphic variant of the reference CCR5 gene sequence and comprises an isolated by a haplotype described in the specification and its encoded polypeptide. The methods of the invention are useful to diagnose and develop treatment for diseases associated with abnormal expression or function of the gene. The CCR5 isogenes and the screened compounds are useful for treating human immunodeficiency vitua (HIV)-1 infection and the progression to acquired immunodeficiency syndrome (AIDS). The invention has antiviral applications. The specification describes genotyping the CCR5 gene of an individual; predicting a haplotype pair for the CCR5 gene of an individual; identifying an association expense a trait and a haplotype or haplotype pair of the CCR5 gene. The specification describes a composition comprising a general areas and an antivity of an analyzaber or haplotype pair of the CCR5 gene. The specification describes a composition comprising a general areas and an antivity of a composition comprising a general areas and a standard and a s
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New haplotypes of the human chemokine (C-C motif) receptor 5 gene, useful to diagnose and treat diseases associated with its abnormal expression or function, including human immunodeficiency virus-1 infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                polymorphism; a recombinant non-human organism transformed with CCRS bylynucleotide expressing a CCRS protein encoded by the variant sequence; an isolated antibody specific for the CCRS polypeptide and a method for screening drugs targeting the CCRS polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 29; Fig 3; 61pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (GENA-) GENAISSANCE PHARM INC.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        05-APR-2000; 2000US-0194361P.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        04-APR-2001; 2001WO-US010708.

The invention discloses a G-protein chemokine receptor (sometimes referred to as a 7-transmembrane receptor) polypeptide, HDGNR10, and the polymucleotide encoding it. G-protein chemokine receptors are involved in signal transduction pathways. The polymucleotide and polypeptide can be useful to identify compounds which activate or inhibit activation of the protein and these compounds are useful for treating a patient having need to activate or inhibit a G-protein chemokine receptor. The compound is doministered by providing to the patient DNA encoding the agonist or antagonist and expressing them in vivo (gene therapy). The polymucleotides and polypeptide are also useful for for diagnosing a disease or susceptibility to a disease related to an under-expression of the protein for chromosome identification or as immunogens for producing antibodies. Agonists are useful in strimulating haematopoiesis, wound haltagonists are useful in the prevention and treatment of allergy, atherogenesis, anaphylaxis, malignancy, chronic and acute inflammation, hastamine and igE-mediated allergic reactions, proversilation, angingenesis, succidesis, rheumatoid arthritis, shock and hyper-eosinophilic syndrome. The sequence presented is the human HDGNRIO protein
```

The present invention describes an isolated nucleic acid molecule, which comprises the sequence of any of the genes that are up-regulated or down-regulated in specific cancers (e.g. about 1031 genes up-regulated in regulated in specific cancers (e.g. about 1031 genes up-regulated in cacute lymphocytic leukemia). ACC75641 to ACC72860 represent cancer related gene nucleotide sequences which encode the proteins given in ABR58521 to ABR58709. Also described: (1) determining the presence or abence of a pathological cell in a patient; (2) an expression vector comprising the vector; (4) an isolated polypeptide, which is encoded by comprising the vector; (4) an isolated polypeptide, which is encoded by comprising the vector; (4) an isolated polypeptide, which is encoded by comprising the vector; (5) an antibody that specifically binds the polypeptide of (4); (6) specifically trargeting a compound to a pathological cell in a complete by administering to the patient the antibody above; and (7) a companient by administering to the patient the antibody above; and (7) a companient of the patient the nucleic acid is useful for therapeutic targets. In particular, the nucleic acid is useful for atheroselex, brain, breast, cervix, colon/rectum, kidney, lung, ovary, companient produces, patient and uterue), wounds, ischaemia, heart diseases, and content of any screening, particularly for identifying agents for treating these contents.

Patent No. 6388055

GENERAL INFORMATION:
APPLICANT: Derk Bergsma, Mary Brawner, and Usman Shabon
APPLICANT: Derk Bergsma, Mary Brawner, and Usman Shabon
TITLE OF INVENTION: CRRS Receptor
NUMBER OF SEQUENCES: 5
CORRESPONDENCE ADDRESS:
ADDRESSEE: SmithKline Beecham Corporation
STREET: 709 Swedeland Road, P.O. Box 1539
CITY: King of Prussia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 US-09-796-202-1

Sequence 2, Application US/0933912A;
Sequence 2, Application US/0933912A;
Patent No. US20020099176A1
GENERAL INFORMATION:
APPLICANT: Li, Yi
APPLICANT: Ruben, Steven, M.
TITLE OF INVENTION: Antibodies to Human G-Protein Chemokine Receptor HDGNR10;
TITLE OF INVENTION: (CCES Receptor);
TITLE OF INVENTION: (CCES Receptor);
TITLE OF INVENTION: (CCES Receptor);
TITLE OF INVENTION: 0/09/339, 912A;
CURRENT FILING DATE: 1999-06-25;
PRIOR PELING DATE: 1999-06-25;
PRIOR PELING DATE: 1998-11-18
PRIOR APPLICATION NUMBER: 08/466,343
PRIOR PELING DATE: 1995-06-06;
NUMBER OF SEQ ID NOS: 9
SOFTWARE: PatentIn version 3.0
                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 2. Application US/09195662A

Sequence 2. Application US/00006745A1

Patent No. US20020068813A1
GENERAL INFORMATION:
APPLICANT: Dragio, Tatjana
APPLICANT: Olson, William
TITLE OF INVENTION: SULFATED CCRS PEPTIDES FOR HIV-1 INFECTION
FILE REFERENCE: 2048/61010/JPW/SHS
CURRENT APPLICATION NUMBER: US/09/796,202
CURRENT FILING DATE: 2001-02-28
NUMBER: OF SEQ ID NOS: 17
SOFTWARE: Patentin version 3.0
SEQ ID NO 1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 2, Application US/09502783A
Patent No. US20020132269A1
GENERAL INFORMATION
GENERAL INFORMATION
APPLICANT: Li, Yi
APPLICANT: Ruben, Steven M.
ITILE OF INVENTION: Polynucleotides Encoding Human G-Protein Chemokine Receptor (CCRS TITLE OF INVENTION: HDGNR.0
FILE REFERENCE: 1488 115006
CURRENT APPLICATION NUMBER: 08/96502,783A
CURRENT FILING DATE: 2001-08-23
PRIOR APPLICATION NUMBER: 08/466,343
PRIOR PLING DATE: 1995-06-06
NUMBER OF SEQ ID NOS: 9
SOFTWARE: PatentIn version 3.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      LIU, ROUG

GENERAL INFORMATION:
APPLICANT: FORSSMANN, Wolf-Georg; FORSSWANN, Ulf; ADERMANN, Knut;
APPLICANT: HEITLAND, Aleksandra; SPODSBERG, Nikolaj
TITLE OF INVENTION: Disgnostic Agent and Medicament for Examining the
TITLE OF INVENTION: Cell Surface Proteome of Tumor and Inflammation Cells and
TITLE OF INVENTION: For Treating Tumor Diseases and Inflammation Cells and
TITLE OF INVENTION: Preferably with the Aid of Specific Chemokine
TITLE OF INVENTION: Receptor Analysis and Chemokine Receptor/Ligand Interaction
FILE REFERENCE: 022217us
CURRENT APPLICATION NUMBER: US/10/239,423
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                0

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
